

Comments:

- We would like to redo this site to include mudmats. Can we fly around mudmats and follow cables?
- Are there any media controllers on the way or are incorporated into mudmats?
- What is the white object (looks like a PVC pipe) South of the Node? What is the "thing" next to it? We have it labeled as "flange", but there is very likely more technical term.
- Please provide description of each item during the dive, during last visit we had position confirmations and biology logged
